

> What is Email Archiving?

Email Archiving preserves and protects all inbound and outbound email messages for later access. It is a great way to recover lost or accidentally deleted emails, accelerate audit response, secure intellectual property emails and attachments, as well as for “eDiscovery” purposes in case of litigation.

> Why do you need Email Archiving?

Are you desperately looking for an important email from last year, but can't seem to find it and you're risking a fine or losing an important business deal as the result of this? Prevent this with a professional Email Archiving solution. Email Archiving is a critical tool to preserve a secure backup of all email and be legally compliant.

At the same time, as email exchanges have judicial power and are legally binding, email compliance has become an extremely important concern for organizations. Therefore it is mandatory in certain industries to preserve a secure backup of all email messages and be legally compliant.

> How does it work?

Nothing easier! Once your inbound and outbound emails pass our systems for email security purposes, you're just one mouse click away from activating the email archiving services as an extra feature! With the intuitive SpamPanel interface you are in full control of your email archive.

> Awesome benefits:

- Never lose an email again!
- Achieve legal compliance
- Improve IT system performance
- Simplified management
- Option to export archived messages

> **How does the SpamPanel work for Email Archiving?**

The SpamPanel is a multi-level central web-interface, with different permission levels and branding options.

Easily access your email archives to quickly search for messages which match the specified criteria. All archived emails are indexed including readable attachments and they can be searched for by using any search string. Furthermore, you can view and manage the status of the Archiving service, including space used, free space available, time frame for storing your archives and a lot more!

Use the Export function to get email copies of the archived messages.
