

## > What is Outgoing Email Filtering?

Outgoing Email Filtering is vital to safeguard your IT infrastructure reputation and assure all your outgoing email always safely arrives where it should. This professional solution will block spam & viruses from leaving your network and prevent your IP(s) from being blacklisted, ever again.

## > Why do you need a professional Outgoing Filter?

Has your network ever sent out malicious email without your knowledge? Due to network weaknesses such as unsecured wireless connection or firewalls allowing any device to transmit outbound SMTP, your IT security may be compromised, allowing spam or malware to be sent out from your network without you even knowing it! Therefore, it's critical you invest in a professional Outgoing Filter solution. Maintain your company's good reputation, stop spam from leaving your network and prevent being blacklisted so that your email always arrives where it is meant to go.

## > How does it work?

Nothing easier! Either directly use our outbound filtering services as your outbound email-server, or re-route all your outbound email from your existing mail-server via the filters. All of this is well documented and can be set-up in a matter of minutes. Moreover, with the intuitive SpamPanel interface you remain in full control of your email flow.

Once implemented, the solution will filter all outgoing spam and viruses, locking down compromised accounts in your network. This assures the delivery of your outbound email and, via reporting tools, allows you to quickly respond to detected abuse in your network.

## > Awesome benefits:

- No more blacklisting
- Protect the reputation of your brand and IT-systems
- Avoid de-listing related costs
- Increase outbound email continuity and delivery
- Enhance employee productivity
- Improve abuse manageability

## > How does the SpamPanel work for Outgoing Filtering?

With the user-friendly SpamPanel, you will get maximum control over your outbound email, assure email continuity, and save human and network resources. Get clear and concise reports indicating which users/accounts require your attention and lock out spamming accounts from your network.

When you log in as Domain-user, you have plenty of awesome features to manage:

[Outgoing Log Search](#) - Search on various strings and options, including sender, outgoing user, recipient, subject, message ID, sender host and sender's IP.

[Manage Outgoing Users](#) - Create/manage outgoing users.

[Generate SPF Record](#) - The system automatically generates the SPF record string along with the current status on the domain.

[Settings](#) - This address is predominately used for ARF (Abuse Report Feedback) reports.

[Outgoing User Settings](#) - Control the outgoing user settings

[Generate DKIM Certificate](#) - Generate a DKIM certificate for your domain.

[Clear Callout Cache \(Outgoing\)](#) - Easily clear the callout cache for an outgoing domain.
